1 Introduction

At the end of 2018 Oracle announced a new business policy for Java SE which entered into force in April 2019. That is why when you install Java a notification and warning window appears. All versions of Java from 8 u201 onwards not intended for personal use are payable.

Important Oracle Java License Update

The Oracle Java License has changed for releases starting April 16, 2019.

The new [Oracle Technology Network License Agreement for Oracle Java SE](#) is substantially different from prior Oracle Java licenses. The new license permits certain uses, such as personal use and development use, at no cost -- but other uses authorized under prior Oracle Java licenses may no longer be available. Please review the terms carefully before downloading and using this product. An FAQ is available [here](#).

Commercial license and support is available with a low cost [Java SE Subscription](#).

Oracle also provides the latest OpenJDK release under the open source [GPL License](#) at jdk.java.net.

For this reason, we suggest you do not update Java 8 to a newer version for work purposes. If you want a newer version of Java 8, install OpenJDK 8 and IcedTea. Also, do not install Java 8 on new computers (clients), but install OpenJDK 8 with IcedTea support.

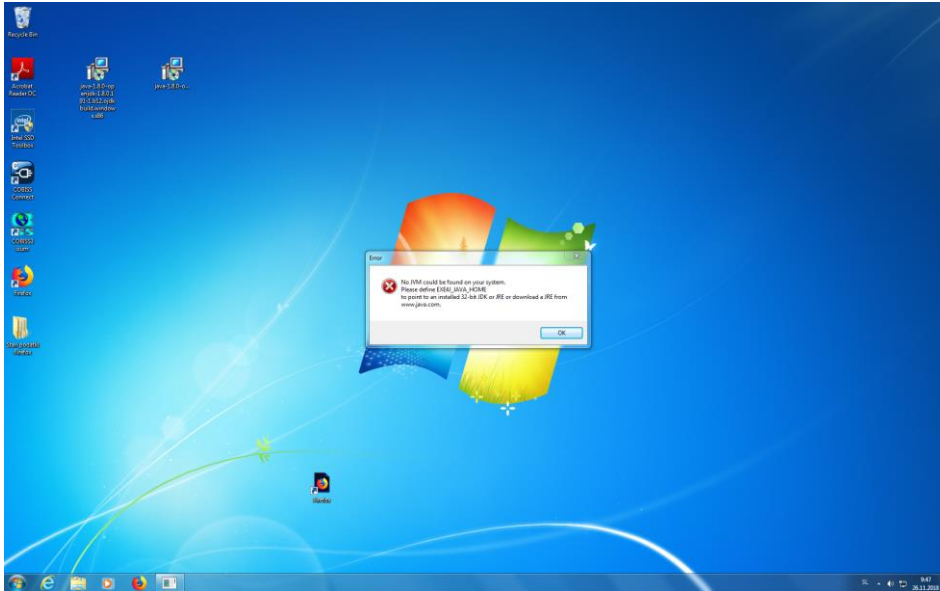

2 OpenJDK distribution

OpenJDK 1.8. build for Windows and Linux is available at the link <https://github.com/ojdkbuild/ojdkbuild>. There you will find versions for the installation. The newest version is always at the top, example from 7 May 2019:

- **Windows x86_64 (64bit)**
 - **1.8.0_191-1** (LTS, supported until [June 2023](#), [announcement](#))
 - [java-1.8.0-openjdk-1.8.0.191-1.b12.ojdkbuild.windows.x86_64.zip](#) (sha256)
 - [java-1.8.0-openjdk-1.8.0.191-1.b12.ojdkbuild.windows.x86_64.msi](#) (sha256)
- **Windows x86 (32bit, [issue](#))**
 - **1.8.0_191-1** ([announcement](#))
 - [java-1.8.0-openjdk-1.8.0.191-1.b12.ojdkbuild.windows.x86.zip](#) (sha256)
 - [java-1.8.0-openjdk-1.8.0.191-1.b12.ojdkbuild.windows.x86.msi](#) (sha256)

3 Removing Oracle Java

First remove the *Oracle Java 1.8* software in **Control Panel, Programs and Features**. Restart the computer so the system variables can be removed and updated and then install the other software – *Open Java Development Kit (ojdkbuild)*

If you are using software which is launched with *Java 8*, a message informing you that the software is no longer installed will appear after you remove *Java*, e.g.:

- MangeeRFIDServiceServer_X86

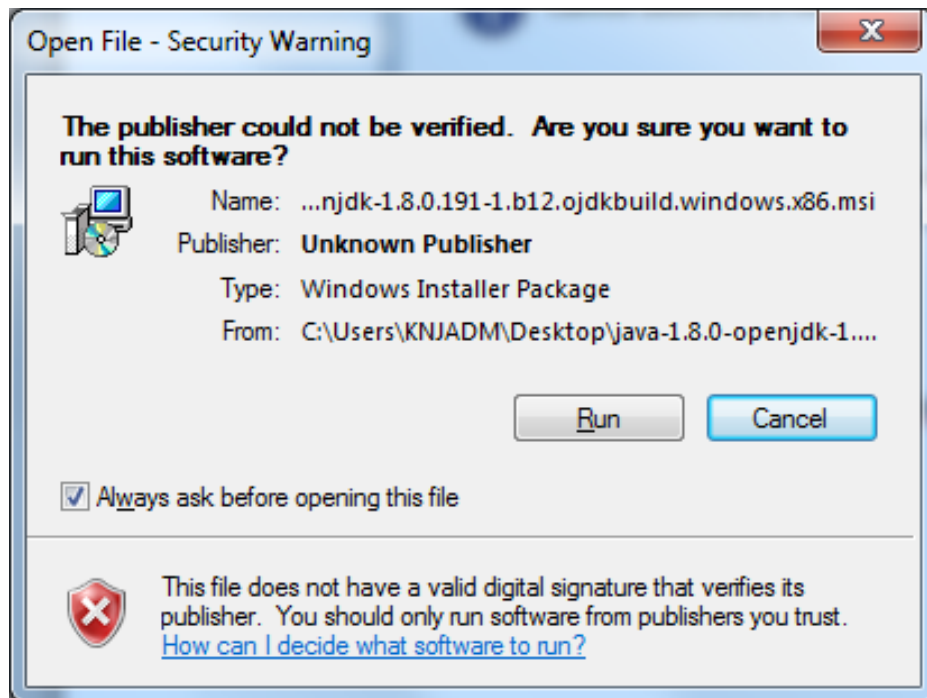

- COBISS Connect or COBISS3 .jnlp short cut

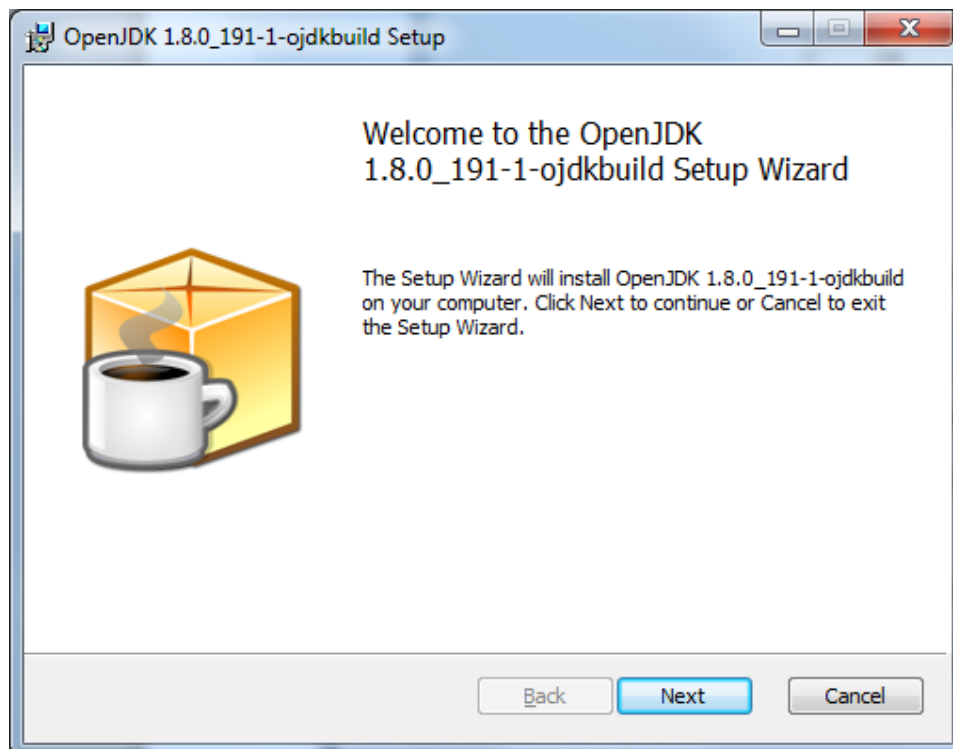

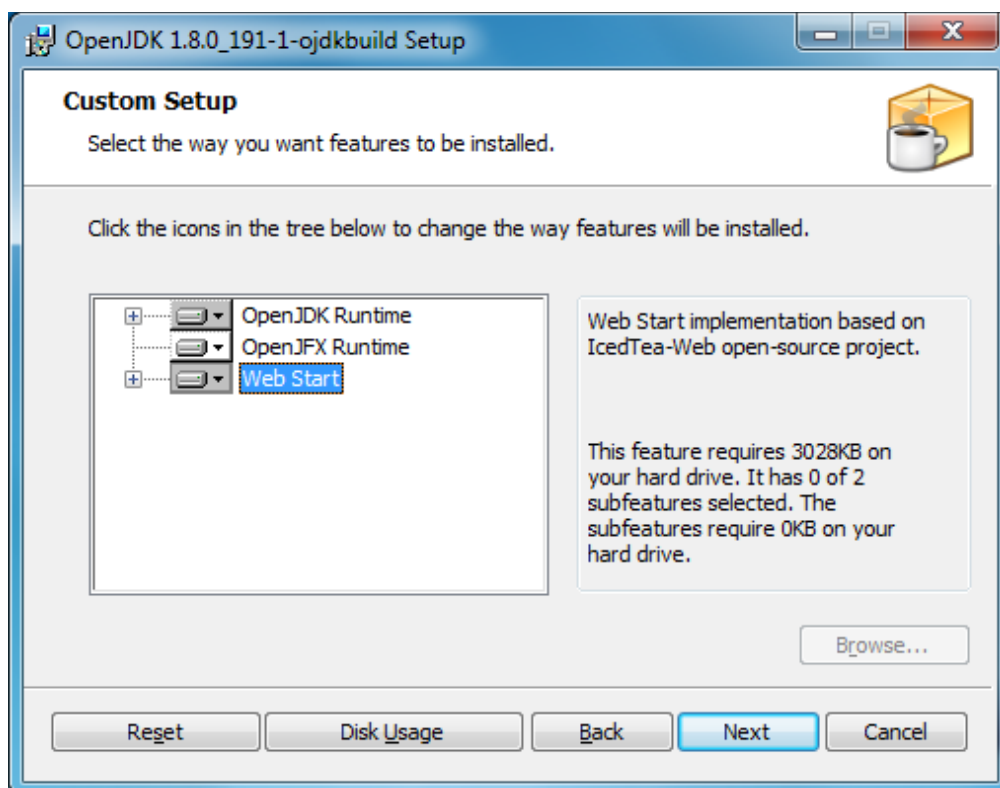

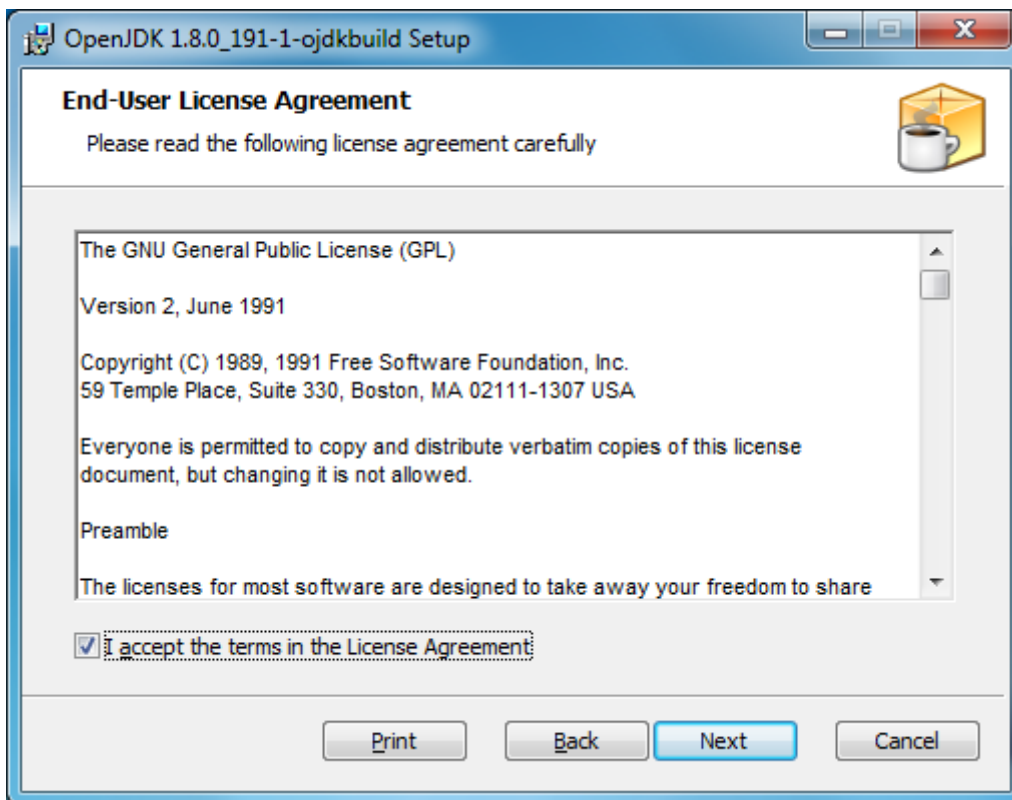

4 Installing OJDK – 32bit or 64bit, IcedTea Java

Once you selected a version that corresponds to the version of your operating system, this window will appear:

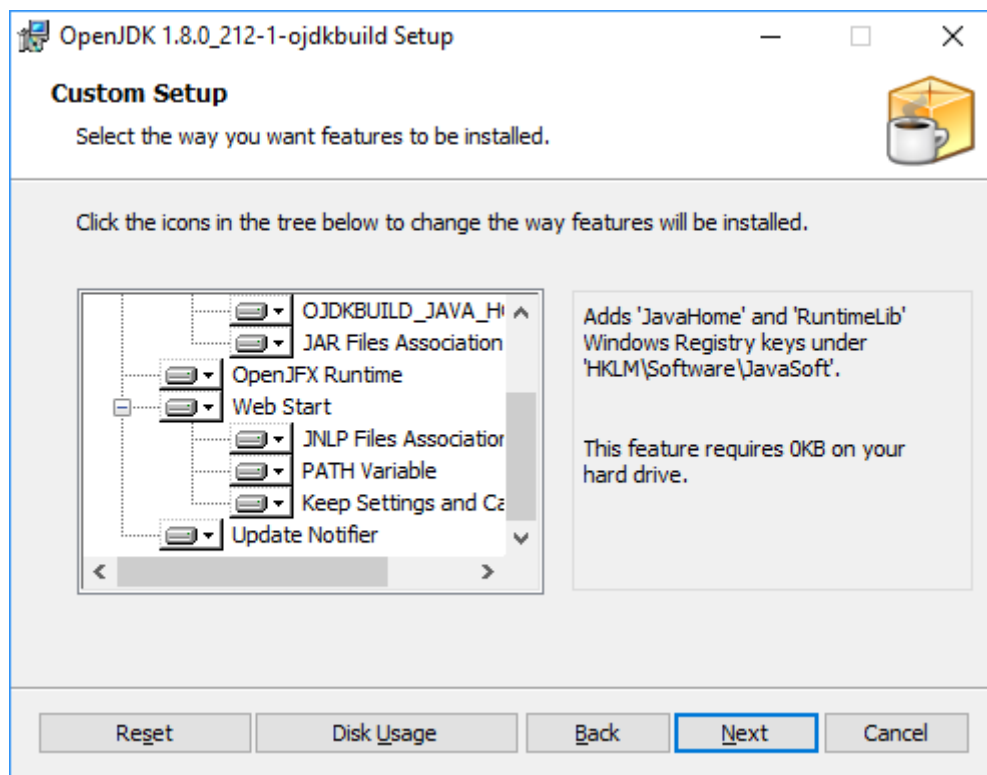

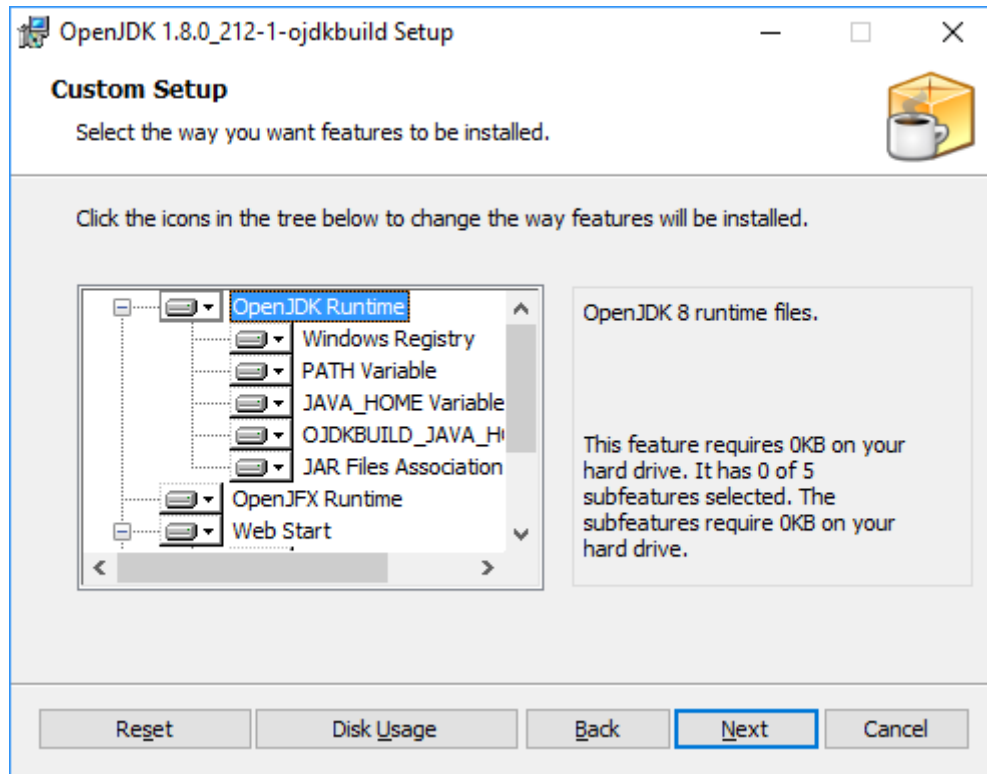

Start the installation by confirming (**Run**). Confirm individual installation steps with **Next**.

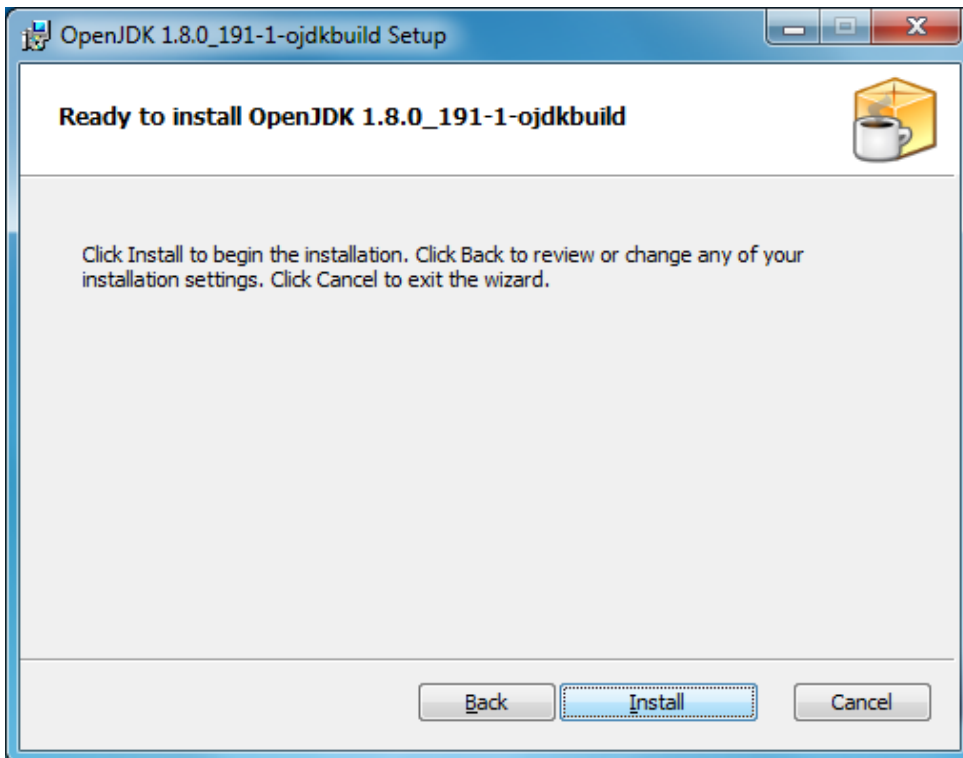

VERY IMPORTANT:

Before you continue with the installation, select all possible installation choices: OpenJDK Runtime, OpenJFX Runtime, Web Start and Update Notifier.

Continue and finish the installation.

5 Installing the COBISS3 interface

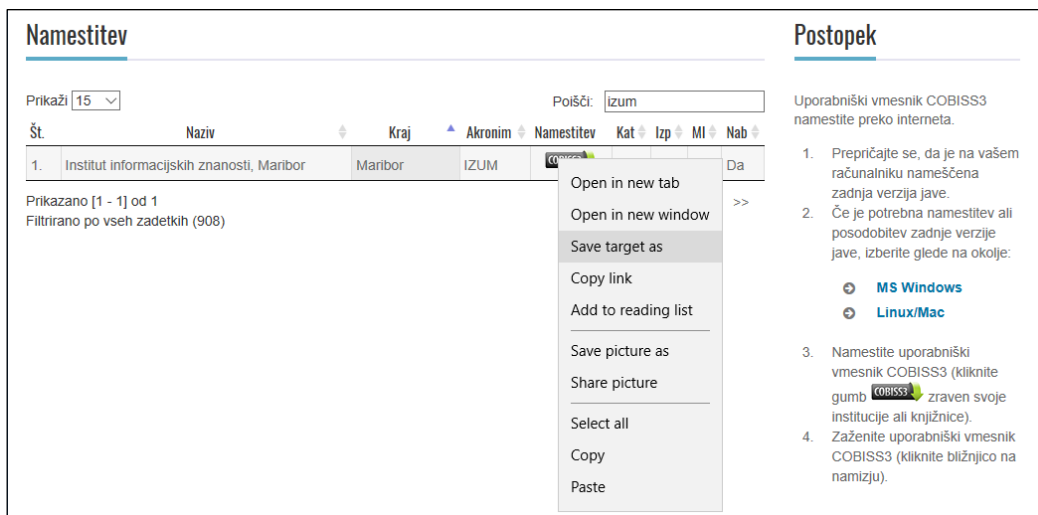

On the COBISS web page select the option *Interface installation* and then enter the library acronym in the *Find:* field, e.g. IZUM.

By right-clicking the COBISS icon, you can save the link to your desktop. The saved link or the **c3_izum.jnlp** file on the desktop enables you to start the interface and login to the COBISS3 system at any time.

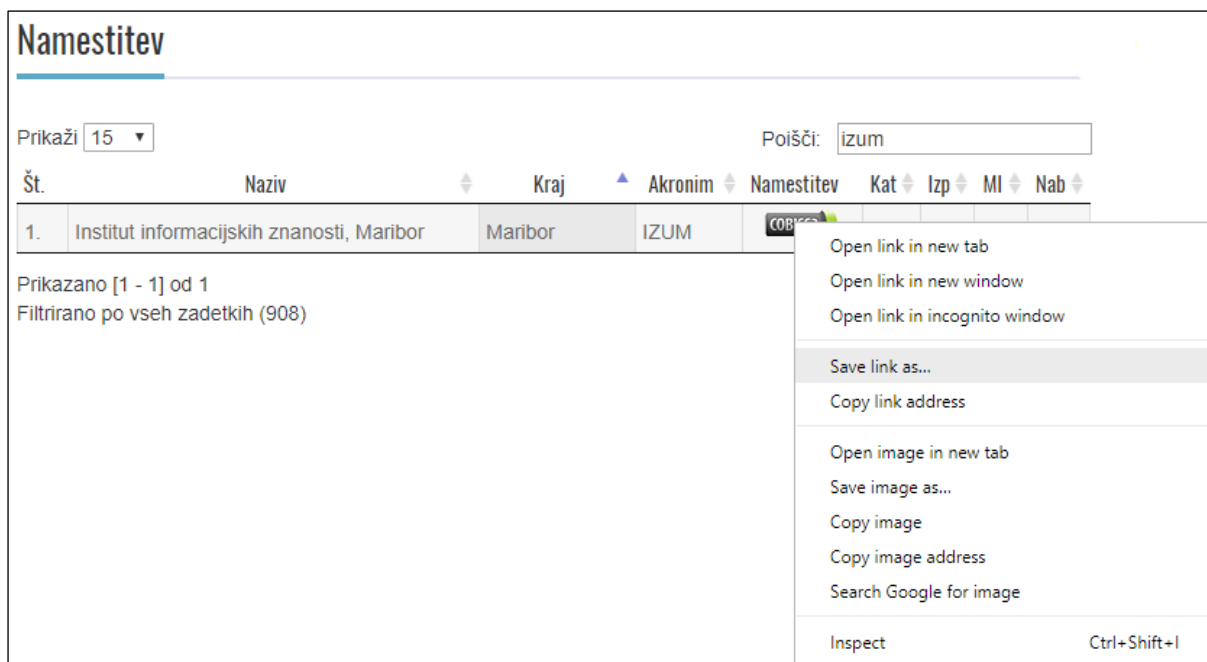

Mozilla Firefox: **Save link as...**

Microsoft Edge: Save target as

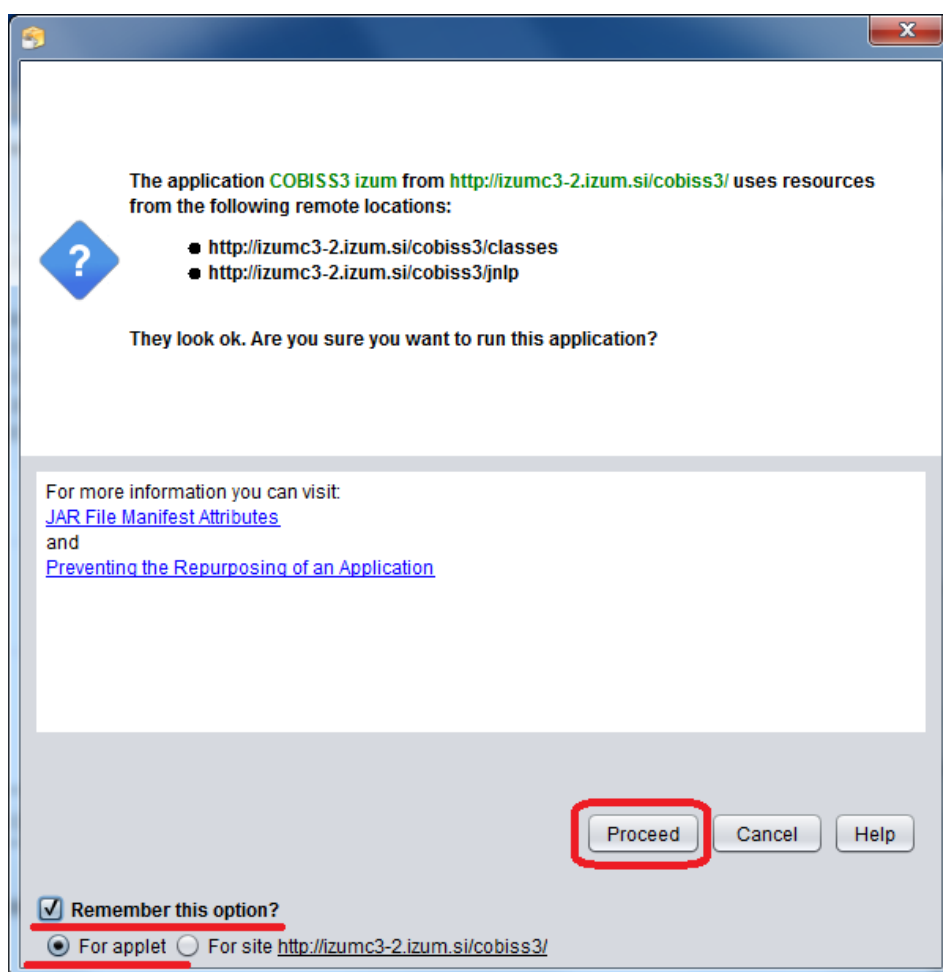

Google Chrome s Save link as...

The **c3_izum.jnlp** file is copied to the desktop. You can open it by double clicking it and launch the COBISS3 interface. The first time you do this, to *IcedTea* software announcement with some data (title, vendor, homepage) is displayed.

In the next step you will see the *IcedTea* window shown below, where you can find the app data. Select *Remember this option* and *For applet* and continue with the **Proceed** button.

Login window for your link (e.g. **IZUM**) will open, where you enter your username and password.

6 Launching the COBISS3 interface

In all subsequent launches of the COBISS3 interface the **IcedTea system ojdkbuild** announcement will first appear after double-clicking the *IcedTea c3_izum.jnlp* icon.

This is followed by the **announcement of the COBISS3 system**, and then the **COBISS3 system** login window.

7 COBISS3 interface as a trusted source in IcedTea ojdkbuild

If you see a security window (*Security Approval Required*), which requires you to confirm the COBISS3 interface as a trusted source, select *Always trust content from this publisher* and continue with **Run**.
