# Installing the folder C:\Cobiss3Files and the system variable COBISS_DIR

The folder **C:\Cobiss3Files** and the system variable **COBISS_DIR** with the value C:\Cobiss3Files can be created by a system administrator either manually or by using the installation software. Both the folder and the variable are required to ensure the correct operation of peripheral devices (e.g. RFID devices, POS terminals, certificates, etc.). They can be created by using the installation software as follows:

1. Administrator privileges are required to carry out the procedure.

2. Run the installation software at the link and unzipped it. Navigate to the folder where you unzipped the installation software and run the *MSIC3Installer.exe* file.

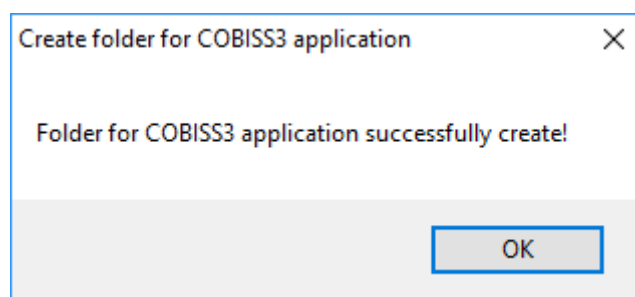

Slika 1

3. The **Create folder** window will open. Continue the procedure by clicking the **OK** button.

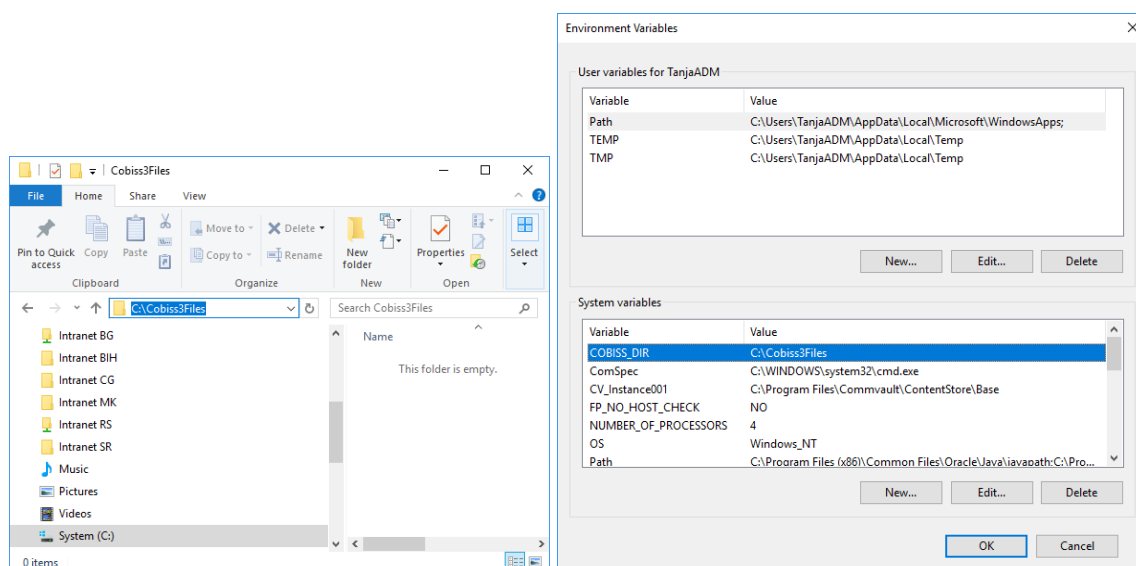

Slika 2

4. The software notifies you that the folder has been created. Complete the procedure by clicking the **OK** button.

Slika 3

5. The folder **C:\Cobiss3Files** and the system variable **COBISS_DIR** are created.
